Interior Single Wythe Masonry Drainage Plane

⊘ Single Wythe Interiors

Separate Single Wythe Masonry from Interiors

Capillary rise is a fact of life in masonry.

Water can move vertically and
laterally through the small pores in
concrete despite our best attempts at
waterproofing. Separating interior building
materials from wet single wythe walls
with Perforated Control Cavity improves
building sustainability.

- Separates Single Wythe Wall From Finished Interior
- Perforated For Cross Ventilation
- ❷ Plastic is 100% Recycled Content

Moisture that penetrates single wythe walls drains down the Perforated Control Cavity to an interior drain field

Perforated Control Cavity features Green Guard® Classic Wrap

Perforated Control Cavity installed on interior of block wall

Installation

- Install Perforated Control Cavity™ with channel pattern running vertically
- Overlap all edges and ends a minimum of 1"
- Overlap horizontal edges shingle fashion to outside concrete or masonry substrate - upper sheet laps behind (back laps) lower sheet
- Over entire wall surface, top to bottom, in this fashion
- Mechanically fasten Perforated Control Cavity 2'4" on center with concrete nails or power fastener

Complete Installation at MTldry.com/installation

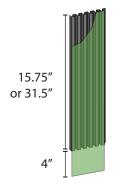

Technical Information

Material Description

0.024" (0.6 mm) thick high impact polystyrene sheets, formed with corrugations and a cross-woven polyolefin fabric (GreenGuard® Classic Wrap) on one side with a 4" (102 mm) skirt on one edge.
