Ventilation: Your Wall's Drying Engine

Drainage removes bulk liquid moisture from a wall, but a little moisture can still do a lot of damage. The key to drying out a wall assembly is to ventilate the rainscreen drainage gap. Vent Strip ventilates a brick cavity wall below the shelf angle to keep your walls dry and sustainable.

The MTI Advantage

- Maintains Airflow Passage at Top of Brick Veneer Wall Section
- Easy to Install
- 100% Recycled Content

Applications

- Full Brick

Vent Strip is installed on the bottom side of shelf angles, and mortar is tuck pointed below Vent Strip on top course of brick.
Installation

- Adhere compressible filler (expansion strip) to the bottom of the shelf angle
- Install 4 9/16” Vent Strip™ with back edge of Vent Strip abutting the fabric face of the Sure Cavity™ and front edge extending approximately 1” past the front edge of shelf angle expansion material. Hold in place with dime size dabs of adhesive.
- Install course of brick below Vent Strip and tuck point in mortar between Vent Strip and brick.
- Tool joint and cut excess Vent Strip off while mortar is still plastic
