The test results contained in this report pertain only to the samples submitted for testing and not necessarily to all similar products.
TESTING OF SURE CAVITY

INTRODUCTION:

This report presents the results of ultraviolet light exposure tests conducted on samples of Sure Cavity. The testing was authorized by Mr. Steve Samec of Masonry Technology Incorporated on April 17, 2007. The testing and data analysis were completed on June 21, 2007.

The scope of our work was limited to conducting ultraviolet light exposure tests on the samples submitted and reporting the results.

SUMMARY OF RESULTS:

QUV Weathering

</table>

SAMPLE IDENTIFICATION:

The samples were identified as Sure Cavity.

TEST METHODS:

The samples were allowed to condition at standard laboratory conditions of 72 ± 4°F and 50 ± 5% relative humidity for at least 40 hours prior to testing. Testing was done according to ICC Standards detailed below, with notes of deviations.

Information and statements in this report are derived from material, information and/or specifications furnished by the client and exclude any expressed or implied warranties as to the fitness of the material tested or analyzed for any particular purpose or use.
