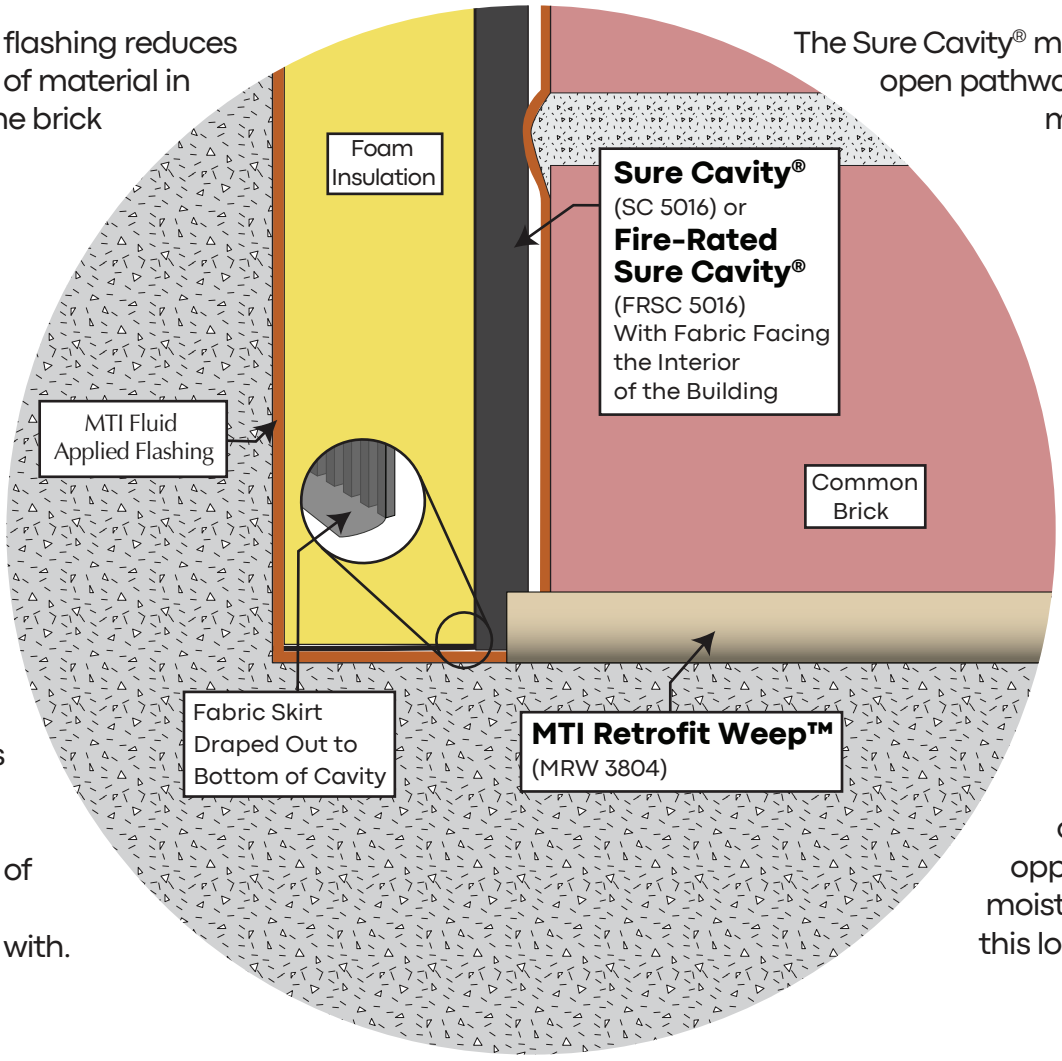
MTI Retrofit Weep™

"The Reason it Works"

This solution has been designed by a person with over 50 years in the construction industry.
The founder of a company that has been manufacturing moisture managment solutions for over 30 years.

The fluid applied flashing reduces the permeability of material in this location of the brick cavity.

The Sure Cavity® maintains a clear, open pathway for moisture to move down to the MTI Retrofit Weeps.



This design limits the space where moisture can be and the amount of material it can come in contact with.

The MTI Retrofit Weeps that are 16" on center at the lowest point in the wall, create numerous opportunities for the moisture that reaches this location to exit the brick cavity.

****This is a viable, cost effective option.**
****The skill level to produce this construction detail is modest.**
****The material required to produce this construction detail are readily available.**
